Daniel Okafor

daniel.okafor@example.com · Berlin, Germany · github.com/dokafor-example

Summary

Machine learning engineer with experience building models and working with data. Passionate about AI and always eager to learn new technologies.

Experience

Machine Learning Engineer, Northwind Logistics, Berlin (Mar 2023 - Present)

- Built a demand forecasting model in PyTorch for 1,200 delivery depots, reducing forecast error (MAPE) from 18% to 11%.
- Deployed the resulting model as a production API service with FastAPI and Docker.
- Responsible for the ML pipeline.
- Worked with the data engineering team on various data quality issues.
- Set up weekly retraining jobs in Airflow and a Grafana dashboard tracking prediction drift.

Data Scientist, Kestrel Insurance, Lagos (Jul 2020 - Feb 2023)

- Developed a claims fraud classifier with gradient boosting (XGBoost) that flagged 3x more confirmed fraud cases than the rules-based system.
- Wrote SQL queries and built reports for the claims department.
- Helped with NLP tasks.
- Presented model results to non-technical stakeholders in monthly reviews.

Projects

- **Contract Q&A assistant** (personal project): retrieval-augmented generation over PDF contracts using sentence-transformers embeddings and an open-source LLM.

Education

- MSc Data Science, University of Lagos, 2020
- BSc Mathematics, University of Ibadan, 2018

Skills

Python, PyTorch, scikit-learn, XGBoost, SQL, Docker, Kubernetes, Airflow, AWS, Git, Grafana
